

### Adobe SendNow – Even Better!

In [January](#), I did a [side-by-side comparison](#) of [YouSendIt](#) and [SendNow](#), the new online file sharing service from [Adobe](#).

When [SendNow](#) was initially launched, it did not support personal branding or all [file types](#) (a potential deal-breaker).

In recent months, both features have been added, making it a much stronger contender. Other changes? [SendNow](#) now supports [access on-the-go](#) using your [iPhone](#) or [Android](#) mobile device.

Pricing remains the same: [Free, Basic, and Plus](#). Variations between plans are based on maximum file size, recipients per transaction, downloads per file, and files per transaction. E-mail return receipts, tracking, and personal branding are only available with paid subscription plans. [Details are available here](#).

[Adobe](#) promises more enhancements to [SendNow](#) in the near future, as it continues its ongoing expansion into cloud-based services. Witness: [Forms Central](#) (online form creation and distribution), [Adobe CreatePDF](#) (online PDF creator), Adobe ExportPDF (online PDF to Word document convertor), and [Acrobat.com web conferencing](#) with all its [bells and whistles](#). All good stuff!
