Orange Legal Technologies Announces Intent to Introduce New Universe Inclusive® Language Capabilities into the OneO® Discovery Platform

Expanding Intergalactic Litigation Warrants Introduction of Klingon and Porcine Latin Language Review Capabilities for Earth-based and Earth-bound Legal Professionals

(Salt Lake City, UT, USA, Earth, April 1, 2009) Orange Legal Technologies, a leading provider of one source litigation, audit, and investigation support services for law firms and corporations seeking insight on electronically stored information (ESI), today announced the planned introduction of new *Universe Inclusive®* language capabilities – to include Klingon and Porcine Latin Language support - into the OneO® Discovery Platform. Launched in June 2008, the OneO® Discovery Platform is a SaaS based, integrated, web-accessible, forensically sound electronic discovery platform that enables online analytics, processing, and review of data from the security of an Earth-based hosted centralized repository.

"As 2008 was the most active year to date for intergalactic judicial opinions and rulings on E-Discovery, it is important that we continue to provide our clients across the universe the most efficient and economic tools available to help them meet the legal and economic challenges associated with the conduct of E-Discovery" stated Bret Laughlin, CEO and President of Orange Legal Technologies. "With the introduction of our *Universe Inclusive®* language support, we can now provide Earth-based clients the capability to analyze, process, and review documents originating on the planet Qo'noS. Additionally, for our Earth-bound clients, we have introduced Porcine Latin language support to ensure our intergalactic clients can address the complexities of this language that many people on Earth learn as a child."

More about Klingon for Earth-Based Legal Professionals

From a legal documentation perspective, the Klingon language has an alphabet of 26 characters, a positional numeric writing system with 10 digits, and is written left-to-right, top-to-bottom. The standard Okrand transliteration for Klingon can viewed at the Conscript Unicode Registry website. [1]

More about Porcine Latin for Earth-Bound Legal Professionals

Porcine Latin is a language derived from a game of alterations using the English Language. To form the Porcine Latin form of an English word the initial consonant sound is transposed to the end of the word and an *ay* is affixed (Ex.: "integrated platform" would yield *integratedway atformplay*). The purpose of the alteration is to both obfuscate the encoding and to indicate for the intended recipient the encoding as 'Pig Latin'.[2]

Availability and Pricing to be announced on February 29, 2010.
