

LSRP: Post-Hurricane Sandy site evaluations

by John M. Scagnelli on November 2, 2012

From the office of SRRA - November 1, 2012

We hope that everyone is recovering from the impacts of Hurricane Sandy. At this time, it is essential to know the condition of sites where you are responsible for conducting remediation, and sites for which you are the LSRP of record. Please evaluate whether the storm caused any of the following:

- New discharges at your site. Any discharges of hazardous substances are required to be reported to the NJDEP Hotline at 877-WARNDEP.
- New immediate environmental concern conditions (water, vapor, direct contact). Immediate actions should be taken to address any immediate environmental concerns identified as part of this response.
- Changes to site conditions requiring a reexamination of your receptor evaluation to determine whether it still accurately represents potential impacts to receptors.
- If you have topic-specific questions regarding site remediation, please refer to the SRP contact list, available at http://www.nj.gov/dep/srp/srra/srra_contacts.htm
