

# **Steel Erection Checklist**

# Christopher G. Hill 804.916.6591 Chill@durrettebradshaw.com

### **Hoisting:**

- ☐ Inspect each crane before each shift
- Do not operate cranes, derricks, or other equipment within 10 feet of power lines
- ☐ Tag lines used for controlling loads

#### Flooring:

- Install permanent flooring as erection progresses
  - Maximum of 8 floors between erection floor and uppermost permanent floor
- Temporary Flooring
  - Derrick or erection floor solidly planked except for access openings
  - Planking 2 inches minimum full size undressed, laid tight and secured
  - If tiered or multi-floored structure, install safety railing of ½ inch wire rope or equal approximately 42 inches around periphery of all floors
- Install perimeter safety cables at the final interior and exterior perimeters of floors as soon as metal decking is installed

### **Roof and Floor Openings:**

- Make sure they are decked over
  - Plank over or guard all unused openings in floor
- ☐ Floor and roof opening covers can withstand at least twice weight of employees, equipment, and materials imposed upon it
- ☐ Marked with "HOLE" or "COVER"

#### **Column Anchorage:**

- Columns anchored by a minimum of 4 anchor bolts
- ☐ Place wire mesh, exterior plywood, or equivalent around columns columns where planks don't fit tightly
